Adding Git to Windows 7 Path (/2012/06/07/adding-git-to-windows-7-path/)

June 7th, 2012

Note: You must have msysgit (<http://code.google.com/p/msysgit/>) installed on your machine. Also, the path to my git install is "C:\Program Files (x86)\Git" yours might be different. Please check where yours is before continuing.

Open Windows Environment Variables/Path Window

- Right-Click on **My Computer**
- Click **Advanced System Settings** link from the left side column
- Click **Environment Variables** in the bottom of the window
- Then under **System Variables** look for the **path** variable and click **edit**
- Add the pwd to git's bin and cmd at the end of the string like this:

```
;C:\Program Files (x86)\Git\bin;C:\Program Files (x86)\Git\cmd
```

Now test it out in PowerShell; type git and see if it recognizes the command.
